

Assignments

1. Write a function to remove duplicates from an array using a Set E.g.: Input → [1, 3, 4, 5, 6, 2, 7, 2, 4, 5] Output → [1, 3, 4, 5, 6, 2, 7]
Code of the program & screenshot of the output.
2. Write a function to merge two sorted arrays using a while loop E.g.: Input → A = [1, 3, 5, 7], B = [2, 4, 6, 8, 9] Output → [1, 2, 3, 4, 5, 6, 7, 8, 9]
Code of the program & screenshot of the output.
3. Write a program to count how many even and odd numbers are in an array. E.g.: Input → [1, 2, 3, 4, 5, 6] Output → Even: 3, Odd: 3
Code of the program & screenshot of the output.
4. Write a function that returns the sum of squares of all elements in an array using reduce() E.g.: Input → [1, 2, 3, 4] Output → 30
Code of the program & screenshot of the output.
5. Write a function that reverses a string. E.g.: Input → "JavaScript" Output → "tpircSavaJ"
Code of the program & screenshot of the output.
6. Write a program to check whether a number is prime or not. E.g.: Input → 13 Output → 13 is a prime number.
Code of the program & screenshot of the output.

7. Write a function to flatten a nested array one level deep. E.g.: Input → [1, [2, 3], 4, [5, 6]] Output → [1, 2, 3, 4, 5, 6]
Code of the program & screenshot of the output.
8. Write a function to capitalize the first letter of each word in a string. E.g.: Input → "hello world" Output → "Hello World"
Code of the program & screenshot of the output.
9. Write a function that removes all falsy values from an array. E.g.: Input → [0, 1, false, 2, "", 3] Output → [1, 2, 3]
Code of the program & screenshot of the output.
10. Write a function using map() to square all numbers in an array. E.g.: Input → [1, 2, 3, 4] Output → [1, 4, 9, 16]
Code of the program & screenshot of the output.
11. Write a function to find the second-largest number in an array. E.g.: Input → [10, 5, 20, 8, 25] Output → 20
Code of the program & screenshot of the output.
12. Write a program that swaps two variables without using a third variable. E.g.: Input → a = 5, b = 10 Output → a = 10, b = 5
Code of the program & screenshot of the output.
13. Write a function that counts the frequency of each character in a string. E.g.: Input → "hello"

Output → { h: 1, e: 1, l: 2, o: 1 }
Code of the program & screenshot of the output.
14. Write a function that reverses an array using a loop. E.g.: Input → [1, 2, 3, 4] Output → [4, 3, 2, 1]
Code of the program & screenshot of the output.
15. Write a function to check whether a string is a palindrome. E.g.: Input → "madam" Output → true
Code of the program & screenshot of the output.
16. Write a function to count the number of vowels in a string. E.g.: Input → "Javascript" Output → 3
Code of the program & screenshot of the output.
17. Write a function that removes all digits from a string. E.g.: Input → "abc123def45" Output → "abcdef"
Code of the program & screenshot of the output.
18. Write a function to convert a string to title case. E.g.: Input → "my name is john" Output → "My Name Is John"
Code of the program & screenshot of the output.
19. Write a function to sum only the numeric values from a mixed array. E.g.: Input → [1, "2", 3, "four", 5] Output → 9
Code of the program & screenshot of the output.

20. Write a program to display the factorial of a number using a loop

Code of the program & screenshot of the output.
