

ARRAY ASSIGNMENTS

SECTION A: COMBINED OPERATIONS WITH UNIQUE/AVERAGE (8 Assignments)

Assignment 2.1

Write a C program to replace all multiples of 5 with 0, then find the sum of all elements: {6, 15, 10, 9, 30, 25}.

Assignment 2.2

Write a C program to delete all odd numbers, then find the sum of remaining elements: {10, 15, 8, 21, 30, 9, 12}.

Assignment 2.3

Write a C program to delete all even numbers, then find the average of remaining elements: {10, 15, 8, 21, 30, 9, 12}.

Assignment 2.4

Write a C program to find the average of all unique array elements: {10, 15, 10, 20, 15, 30}.

Assignment 2.5

Write a C program to delete all repeating elements from an array (keep only elements that appear once): {10, 15, 10, 20, 15, 30, 10}.

Assignment 2.6

Write a C program to reverse an array, then delete all multiples of 3: {12, 15, 8, 9, 20, 7, 30}.

Assignment 2.7

Write a C program to replace all prime numbers with -1, then delete all negative numbers: {7, 12, 13, 18, 11, 20, 9}.

Assignment 2.8

Write a C program to find the sum of all elements. If sum > 50, delete all odd numbers. If sum ≤ 50, delete all even numbers. Array: {10, 15, 8, 22, 7, 30, 12}.

Assignment 2.9

Write a C program to replace all multiples of 4 with 0, then find the sum of remaining (non-zero) elements. Array: {12, 7, 16, 9, 20, 11, 8}.

Assignment 2.10

Write a C program to delete all elements that come immediately after a multiple of 2. Array: {6, 10, 9, 15, 12, 7, 18, 20}.

Assignment 2.11

Write a C program to replace all prime numbers with -1, then delete all negative numbers, then reverse the remaining array. Array: {7, 12, 13, 18, 11, 20, 9}.

Assignment 2.12

Write a C program to find the average of all elements. If average > 15, delete all odd numbers. If average ≤ 15, delete all even numbers. Array: {10, 12, 8, 20, 15, 18}.

Assignment 2.13

Write a C program to display an array after skipping one element next to each multiple of 5.
Array: {5, 10, 15, 8, 20, 7, 25, 12, 30}.

Assignment 2.14

Write a C program to separate even and odd numbers into two different arrays, then print the array that has more elements. Array: {12, 7, 18, 9, 24, 11, 30, 5}.

Assignment 2.15

Write a C program to replace all elements at **odd positions** with **0**, **only if** the element at that position is an **even number**.

Given Array: {10, 14, 8, 6, 20, 12, 7}

Assignment 2.16

Write a C program to delete two elements after every odd number. Array: {5, 10, 15, 8, 7, 20, 9, 12, 18}.

Assignment 2.17

Write a C program to find all prime numbers in an array and replace them with 0, then find the sum of the array. Array: {5, 8, 13, 9, 4, 17}.

Assignment 2.18

Write a C program to delete all unique elements from an array (keep only duplicate values).
Array: {10, 15, 10, 20, 15, 30, 25}.

Assignment 2.19

Write a C program to sort an array and count the number of unique elements. Array: {4, 5, 4, 6, 6, 7, 8}.

Assignment 2.20

Write a C program to find the average of all unique elements in an array. Array: {10, 15, 10, 20, 15, 30, 25}.
